

# WYSSMONT<sup>®</sup>'s TURBO-DRYER<sup>®</sup>

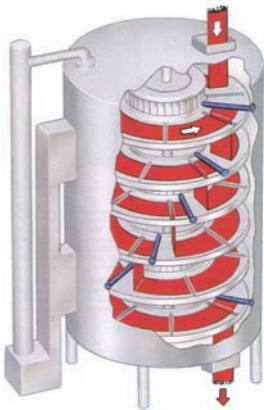

## Torrefaction of Biomass Materials

### Advantages:

- Continuous, atmospheric pressure operation
- Unattended operation
- Closed circuit, superheated steam system
- Adjustable BTU output from 9000 to 11,500 BTU/lb
- Proven Technology

The Wyssmont TURBO-DRYER<sup>®</sup> thermal processor has proven to be the best dryer-reactor to successfully torrefy wood chips.

Torrefaction of biomass is one of the most promising bioenergy technologies because it transforms a bulky biomass into a high quality product that can be readily co-fired with coal, without the need to change anything within an existing coal fired power plant.

*IT PAYS TO BUY THE BEST*
